

Ridgeway cross-section by Holliday, McMillan, Tedder (1999) provided by Newcrest Mining Ltd.; units re-keyed

LT 2379 LEGEND

Unit No	Unit Description
1	T Canobolas flood basalt, trachyte
2	S1-2 Cadia Coach Shale, litharenite
W sub-2	Paleoreolith under Cadia Coach Shale unconformity; bleached and carbonate-infiltrated monzonite
M4 + A	Or3-S1 upright zone of bulk-mined stockwork veining and disseminations of quartz, magnetite, chalcopyrite, bornite, gold in K-feldspar, albite, actinolite, epidote, biotite altered meta-volcanics about a monzonite porphyry plug. The early alteration is overprinted by later propylitization. Rc 44 Mt @ 2.6 g/t Au, 0.82% Cu
3	Or3 Cadia Hill Monzonite; slightly alkaline (shoshonitic) orthoclase-phyric quartz-monzonite porphyry grading to equigranular quartz monzonite and diorite; augite porphyry dikes
4	Or3 Weemala Fm.; calcareous siltstone, shale, impure limestone
5	Or3 Forest Reef Volcanics; locally shoshonitic augite andesite flows, breccias, volcanoclastics, minor shale and limestone

LT 2379 SAMPLE DESCRIPTION (collected and assembled by Peter Laznicka, 2000)

Unit No	Sample Description	Sample No
1	Flood basalt	1, 2
M4 + A	Late stage fracture calcite, laumontite	3
	Late stage epidote fracture veins and metasomatites, minor disseminated chalcopyrite, bornite	4-6
	Quartz, magnetite, bornite sheeted veins	7-12
	Quartz, chalcopyrite, pyrite veins	13-18
	Fracture filling bornite in K-feldspathized monzonite	19, 20
